SUMMARY

Software engineer and team lead specializing in scalable system design, machine learning, real-time data, and AI-native products (LLM agents, RAG, MCP). Led cross-functional teams, cut latency, and delivered user-centric systems for enterprises with up to 100M+ users.

SKILLS

Programming Languages Go, Java, Python, TypeScript, SQL	Backend API, REST, gRPC, GraphQL, WebSocket, WebRTC, JWT, OAuth 2.1, WebAuthn, MCP, CRDT, Spring, Quarkus	DevOps CI/CD, GitHub Actions, Terraform, Pulumi, Ansible, MLOps, Docker, Kubernetes, Helm, AWS, GKE, GCP, nginx, Sentry, Grafana, k6 load testing, Testcontainers
Machine Learning NLP, LLM, RAG, LangGraph, BERT, CNN, RNN, PyTorch, TensorFlow, Scikit-learn, OpenCV, Spark, A/B testing	FrontEnd React, Redux, Zustand, MobX, Flutter, BLoC	Storages & Transport NATS, Kafka, ClickHouse, Postgres, YugabyteDB, MongoDB, ElasticSearch, RabbitMQ, InfluxDB, neo4j, Redis, Snowflake, BigQuery, Weaviate
Software Jira, YouTrack, Confluence, WSO2, Slack, Bruno/Postman, GitHub, GitLab, Figma, Notion, Mermaid, Claude Code		

EXPERIENCE

Banank — Backend Development Team Lead	November 2024 – Present
— Took the bank from zero to MVP: core banking platform, ledger on Apache Fineract with a double-entry model — Hired and led the backend team; set up ADR-based architecture reviews, code review and release process — Cut time-to-market for new features with CI/CD, contract-first APIs and WSO2 publishing automation — Architected systems from scratch: microservices, event-driven infrastructure (NATS), data lake, Server-Driven UI — Built AI agents automating technical, accounting, and legal workflows, delivering ~\$300K in annual cost savings — Security: FIDO2/WebAuthn, multi-channel OTP, KYC/AML (AMLD-compliant), Tazama real-time transaction monitoring	
Samsung — Head of Research and Development Team	August 2023 – November 2024 Eastern Europe
— Reduced HelpDesk team workload by 23% by implementing LLM, RAG, topic classification, and agent recommendation — Created a search/recommendation system with 11-50ms response time for 20M+ records: entities, names, products — Boosted SERP satisfaction metrics from 30% to 73% by developing and deploying custom algorithms for user needs — Analyzed 200M+ user requests to refine system boundaries and improve performance through behavior analysis — Built a robust testing framework, scaling from zero to 7,600 unit, integration, and performance tests	
Nokia — Senior Software Engineer	May 2021 – June 2023 Eastern Europe
— Designed and developed architecture supporting over 100 million users and 64,000+ users per node — Created an adaptive interface for new base station configurations, eliminating manual modifications — Developed GROK pattern generation using Transformers with a user-friendly UI, enhancing logging quality by 70% — Led system design initiatives with major cellular operators, coordinating a team of 40+ engineers	
Locka — Team Lead	June 2020 – May 2021 Sweden
— Engineered real-time streaming capabilities supporting resolutions up to 4K, enhancing user experience — Optimized the authorization service, reducing load by 87% (from 350 to 45 RPS) to improve system stability — Boosted up to 700% user engagement by developing an innovative apartment selection system	
Kia — Junior → Middle → Senior → Team Lead	June 2017 – June 2020 Eastern Europe
— Designed and deployed semantic search over a corpus of 340,000+ documents, improving retrieval accuracy — Optimized search infrastructure to cut latency by 90%, from 400ms to 30-50ms, while scaling to 1,000 RPS — Classical ML analysis (Linear/Logistic Regression, Random Forest), cutting processing time from 1 hour to 1 minute	

PERSONAL PROJECTS

nextdocs.ai
— Founded and built a 14-service AI documentation platform: Go, TypeScript, Python; NATS JetStream, Postgres, Weaviate, Helm — Real-time collaborative editor on Yjs CRDT over NATS with two-way GitHub sync; RBAC via NATS auth-callout + JWT — MCP server (36 tools) with OAuth 2.1 for Claude connectors; RAG (tree-sitter → BGE-M3 → Weaviate) and LangGraph agent — Rolled out the platform at a client company: self-hosted deployment, team onboarding, roadmap driven by user feedback
web.gomusic.com — Cross-platform music sharing and recognition app for iOS, Android, and Web: AWS, Python, Flutter, Go, Node.js

EDUCATION

MSc, Computer Science — KNU	2020 – 2022
BSc with Honours, Computer Science — KNU	2016 – 2020

LANGUAGES

English — C1 • Ukrainian — Native • Russian — Native/Bilingual • Estonian — Basic

CERTIFICATES

– 2019, NASU, Artificial Intelligence	– 2020, Cisco, Routing and Switching	– 2020, Cisco, Networks
– 2020, Cisco, Programming in Python	– 2020, Cisco, Cybersecurity
